Objective of Course

This event is focused on offering a high-level scientific forum to encourage multidisciplinary interactions to build a bridge between scientific research & clinical application. Clinical strategies for Prevention, Control and management of Tuberculosis and other chest disease revolves round prompt diagnosis and timely actions based on precision-based screening and protocols tackling risk factors like extensive drug therapy of vulnerable population. New technology and risk algorithms allow us to increase the precision of screening and the sensitivity of existing tools for early detection and management.

Course Content

Recent Advances in Diagnosis & Management of Tuberculosis,
Role of Medical College in NTEP Program
